

## Project Design Phase-II Technology Stack (Architecture & Stack)

Date	27 October 2023
Team ID	593151
Project Name	Predicting Mental Health Illness Of Working Professionals Using Machine Learning
Maximum Marks	4 Marks

### Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

**Table-1 : Components & Technologies:**

S.No	Component	Technology
1.	<b>Programming Language</b>	Python: Widely used for machine learning and has extensive libraries and frameworks.
2.	<b>Data Collection and Storage</b>	SQL or NoSQL databases (e.g., PostgreSQL, MongoDB) for storing structured or unstructured data related to professionals' mental health.
3.	<b>Data Preprocessing</b>	<ul style="list-style-type: none"> <li>Pandas: For data manipulation and cleaning.</li> <li>NumPy: For numerical operations on the data.</li> </ul>
4.	<b>Machine Learning Framework</b>	<ul style="list-style-type: none"> <li>Scikit-learn: Offers a variety of tools for data mining and data analysis.</li> <li>TensorFlow or PyTorch: Deep learning frameworks for building and training neural networks.</li> </ul>

5.	<b>Model Selection</b>	<ul style="list-style-type: none"> <li>Logistic Regression, Decision Trees, Random Forests: For simpler models.</li> <li>Neural Networks: For complex patterns in the data.</li> </ul>
6.	<b>Model Evaluation</b>	<ul style="list-style-type: none"> <li>Cross-validation techniques to assess model performance.</li> <li>Metrics like accuracy, precision, recall, and F1 score to evaluate the model's effectiveness.</li> </ul>
7.	<b>Hyperparameter Tuning</b>	GridSearchCV or RandomizedSearchCV in Scikit-learn for optimizing model parameters.
8.	<b>Deployment</b>	<ul style="list-style-type: none"> <li>Flask or Django: For building a web application.</li> <li>Docker: Containerization for easy deployment and scalability.</li> <li>Cloud services (e.g., AWS, Azure, Google Cloud) for hosting the application.</li> </ul>
9.	<b>Monitoring and Logging</b>	<ul style="list-style-type: none"> <li>Implement logging mechanisms to track model performance and user interactions.</li> <li>Set up monitoring tools to identify issues and ensure the system's reliability.</li> </ul>
10.	<b>Security</b>	<ul style="list-style-type: none"> <li>Implement secure coding practices.</li> <li>Protect sensitive user data and comply with data protection regulations.</li> </ul>
11.	<b>User Interface</b>	<ul style="list-style-type: none"> <li>HTML, CSS, JavaScript for creating a user-friendly interface.</li> <li>Visualization libraries like D3.js or Chart.js for displaying insights.</li> </ul>
12.	<b>Collaboration and Version Control</b>	<ul style="list-style-type: none"> <li>Git: For version control.</li> <li>Platforms like GitHub or GitLab for collaboration.</li> </ul>

**Table-2: Application Characteristics:**

S.No	Characteristics	Description
1	<b>Data Privacy and Security</b>	<ul style="list-style-type: none"> <li>Implement robust data encryption and ensure compliance with data protection regulations.</li> <li>Prioritize user consent and clearly communicate how their data will be used.</li> </ul>
2	<b>User-Friendly Interface</b>	<ul style="list-style-type: none"> <li>Design an intuitive and user-friendly interface to encourage regular usage.</li> <li>Include simple and clear instructions for users to input relevant data.</li> </ul>
3	<b>Comprehensive Assessment</b>	<ul style="list-style-type: none"> <li>Incorporate a diverse range of factors such as work-related stressors, sleep patterns, physical activity, and social interactions.</li> <li>Utilize validated mental health assessment tools to ensure accuracy.</li> </ul>
4	<b>Real-time Monitoring</b>	<ul style="list-style-type: none"> <li>Enable continuous monitoring to detect changes in mental health over time.</li> <li>Provide timely alerts or recommendations based on the analysis of user data.</li> </ul>
5	<b>Personalized Insights</b>	<ul style="list-style-type: none"> <li>Tailor recommendations based on individual profiles and preferences.</li> <li>Consider factors like personality traits and coping mechanisms in the analysis</li> </ul>
6	<b>Integration with Wearables</b>	<ul style="list-style-type: none"> <li>Allow users to connect their wearable devices to provide additional data for analysis.</li> <li>Incorporate features that leverage biometric data for a more holistic understanding</li> </ul>
7	<b>Education and Resources</b>	<ul style="list-style-type: none"> <li>Offer educational content on mental health, stress management, and coping strategies.</li> <li>Provide links to relevant resources and support networks.</li> </ul>

8	<b>Multilingual Support</b>	<ul style="list-style-type: none"> <li>• Ensure the application is accessible to a diverse user base by offering multiple language options.</li> <li>• Consider cultural nuances in the design and recommendations.</li> </ul>
9	<b>Machine Learning Algorithms</b>	<ul style="list-style-type: none"> <li>• Use advanced machine learning algorithms for accurate prediction.</li> <li>• Continuously update and refine the algorithms based on user feedback and evolving research</li> </ul>
10	<b>Feedback Mechanism</b>	<ul style="list-style-type: none"> <li>• Include a feedback system to gather user input and improve the application over time.</li> <li>• Encourage users to report any concerns or inaccuracies in predictions.</li> </ul>
11	<b>Collaboration with Professionals</b>	<ul style="list-style-type: none"> <li>• Provide an option for users to share insights with mental health professionals.</li> <li>• Collaborate with mental health experts to enhance the accuracy of predictions and recommendations</li> </ul>
12	<b>Scalability</b>	<ul style="list-style-type: none"> <li>• Design the application to handle a growing user base and evolving technology.</li> <li>• Ensure the infrastructure can support increased data volume without compromising performance.</li> </ul>
